

FKHC Series High Closing Force Angular Grippers

**Prices effective
September 1, 2011**

Features

1. Magnetic piston is standard feature.
2. Unique design includes the use of a second moveable part (piston), applying additional force to the gripper jaw when pressurized to close.
3. Compact design make grippers ideal for handling small parts in confined areas.
4. Gripper body is hardcoated aluminum ensuring abrasion and corrosion resistance.
5. Adjustable needle valve to control speed of jaw motion.

• Work holding point should be within the range indicated in the graphs at the right.

Selecting the proper gripper considering component weight

- Selection of the correct model depends upon the component weight, the coefficient of friction between the finger attachment and the component, and respective configurations. A model should be selected with a holding force of 10 to 20 times that of the component weight.
- If high acceleration, deceleration or impact forces are encountered during component transfer, a further margin of safety should be considered.

Effective holding force

- The holding force shown in the tables represents the holding force of one finger when all fingers and attachments are in contact with the work. F = one finger thrust as shown below.

Conversions

- $lbf = N \times 0.224$
- 0.2 MPa = 29 psi
- 0.3 MPa = 43 psi
- 0.4 MPa = 58 psi
- 0.5 MPa = 72 psi
- 0.6 MPa = 87 psi
